

Florida students succeed with Imagine Learning

Imagine Learning's Engaging Digital Instruction Now Paired with ATI's First-Class Assessment System

Providing **effective digital curriculum** with a focus on the **diversity of language learners** in schools has been Imagine Learning's driving focus since our company's beginnings more than fourteen years ago. In order to amplify the delivery of our instruction to students, we've joined forces with a company whose origins are steeped in building empirical assessment tools that cover all educator needs. We're proud to announce **the addition of ATI (Assessment Technology, Inc.)** to the Imagine Learning portfolio of solutions.

The combination of our two organizations means that ATI's flagship product, **Galileo® K-12**, will be infused over time into our literacy, language, and math offerings. Specifically, for back to school 2019, Imagine Language & Literacy will be refreshed with an **all new benchmark assessment with full universal screening capabilities**. Additionally, a full **progress monitoring** solution and **predictive data warehousing** will also be added allowing Imagine Language & Literacy customers to deeply impact the rate of learning by closely tracking skills-based growth for students at risk. Galileo K-12's data warehouse allows educators to look at all relevant data in one place and predict state and local test performance.
